PART I

INTRODUCTION

ABOUT THE REPORT

Following the positive feedback of the previous year's report, which received an overall useful content rating of 7.7⁽¹⁾ out of 10 from those who downloaded the report, the ITviec team is delighted to present a more extensive analysis in this year's edition, "**Salary & Job Expectation of IT Professionals in Vietnam 2023 - 2024, Data-driven for better decision making**". The report now includes **25 IT positions**, marking an increase of **8 positions** compared to last year's report⁽²⁾.

In the recently completed IT Salary Survey, conducted online from September 19, 2023, to October 10, 2023, valuable time and feedback were provided by IT professionals. After carefully filtering out unqualified responses and outliers, the final number of respondents in this year's report stands at **2,207**. This figure represents a significant increase of **76%** compared to the number of final respondents recorded in the previous year. However, this substantial increase has also influenced the shifts of several crucial findings related to salaries by city and demographic factors.

Qualified respondents are ITviec users and from other sources that do not relate to ITviec platform, who are living and working in Vietnam. The report does not include IT freelancers and people who do not work in IT.

By incorporating more design updates and content revisions into this year's report, the ITviec team expect to make a greater contribution to the IT job market in 2023-2024.

On top of that, the message from **Mr. Naoto Iijima, CEO of ITviec**, affirms the following:

"The IT job market can learn a lot from what IT professionals responded about salaries and job expectation, new technologies, career goals, and other important demographic factors. Business leaders can utilize these findings to make better hiring strategies and make companies a better place to be. We hope that the use of more in-depth cut and diced data in this year's report will boost confidence in our valued IT professionals and IT employers, enabling everyone to make better decisions that will lead to more effective long-term employment matches."

DISCLAIMER

The salary and information in this report were determined by analyzing the responses from **2,207 IT professionals** from a variety of positions, programming languages, years of experience, cities and so on. The inclusion of this data by ITviec is intended only to provide general insights into salaries for the stated positions/groups and does not indicate a confirmation of its validity.

Whilst every effort has been made to ensure the accuracy of the statistics in the report, ITviec cannot be held responsible for any errors or omissions, or for the results obtained from the use of the report information. If you wish to use copyrighted materials from this report for purposes of your own that go beyond fair use, you must obtain written permission from ITviec.

- **Median salary**

Median salary is the middle value in the set of data that was sorted.

For instance, the sorted salary value data set for Back-end Developers with 1 to 3 years of experience are as follows:

26, 27, 28, 28, 28, 30, 31, 31, 32, 34

The set contains 11 data numbers. The middle value of the data set is 28.

> Median salary is 28.

Or 28, 28, 28, 28, 30, 31, 31, 32, 34, 60, 66, 82, 85, 85

The set contains 14 data numbers. The middle value of the data set is 31 and 32.

> Median salary is $(31 + 32) / 2 = 31.5$.

The median number of years of experience is calculated in the same way as the median salary.

- **Average salary**

Average salary is the result of the formula below:

$(\text{sum of salaries in specified group}) / (\text{amount of respondents}) = \text{average salary}$

For instance, average salary of IT professionals in Ho Chi Minh City is:

$(13 + 18 + 34 + 32 + 54 + 76 + 90 + 34 + 45 + 20) / 10 = 41.6$

- **Percentage**

Percentages may not always equal 100% due to variations in the types of questions and answers. Some questions and answers are altered based on the respondent's previous responses. In some cases, the distribution of answers for certain questions exceeded 100% due to the checklist answer type. Respondents were allowed to select more than one answer, up to a maximum of 10.

PART II

KEY TAKEAWAYS

Solution Architect holds the position as the highest-paid among 25 IT positions.

Solution Architects in this year's report earn a median monthly salary of **63 million dong** with 2.5 years of experience in that role. Following closely is the **Tech Lead**, securing the second spot with **50 million dong** for those with **3 years of experience**. The third position goes to the **Project Leader/Project Manager**, earning an impressive **48 million dong per month** with **5 years of experience**. These roles, primarily rooted in technical expertise, often transition into technical management, resulting in their consistently high salaries in both the short and long term. (page 23)

IT companies with origins from Australia and New Zealand offer highest salaries.

Based on the responses, IT professionals employed by **Australian and New Zealand-originated companies** earn an average monthly salary of **56.7 million dong**, representing the highest range among the nationalities included in the list. On the contrary, the average monthly salaries offered by companies originating from **Vietnam** and **Japan** are the most moderate, equal to **30.1 million dong** and **32.7 million dong**, respectively. Companies with origins from **Europe, the United States, and Canada** offer a monthly salary range from **45.7 to 46.7 million dong**. (page 28)

Pharmaceuticals, Banking, and Financial Services rank as the top three industries offering IT professionals the highest monthly salaries.

According to the responses from 2,207 IT professionals in this report, **Pharmaceuticals, Banking, and Financial Services** stand out as the top three industries with the highest average monthly salaries, reporting salaries of **47.9 million dong**, **40.5 million dong**, and **38.6 million dong**, respectively.

In **Danang**, the **Game** industry stands out by offering the highest average salary range for IT professionals, reaching **44.5 million dong per month**. In **Hanoi**, the **Professional Services sector, including Accounting, Legal, and Business Consulting**, takes the lead with the highest monthly salary at **39.6 million dong**. Meanwhile, **Ho Chi Minh City** aligns with the country's trend, with **Pharmaceuticals** ranking as the highest-paying industry, offering an impressive monthly salary of **54.8 million dong**. (page 29)

15% of IT professionals recently resigned from their jobs due to the companies' restructuring and reduction (layoff) strategies.

According to this year's report, 331 individuals, which is equivalent to 15% of the respondents, stated that they quit because of the company's downsizing and layoff strategies. When taking a closer look, there are a few quick highlights:

- **41.9%** of the individuals are employed by Product Companies.
- **53%** of them are working for a company that originated in Vietnam.
- IT professionals with **5-8 years of experience in IT (30.8%)** and IT professionals with **1-2 years of experience (22.7%)** were most impacted compared to other groups.
- The **Top 3 Company Industries** with the highest number of IT professionals resigning due to this situation are **Banking, Software Product and Web Services, and E-commerce**. ([page 21](#))

Health-related issues have been ranked 4th and 5th, respectively, in the hierarchy of difficulties/challenges in IT jobs.

Mental pressure, stress (29.6%), and physical health decline issues (24.1%) rank among the top five challenges in IT jobs, alongside unexpected work requests (38.9%), fear of missing out (FOMO) (38.5%), and limited English proficiency (33.8%). These findings emphasize the importance of addressing well-being issues to ensure sustained performance in IT jobs. Both IT professionals and companies must prioritize initiatives to enhance the working environment, streamline workflows, and adopt targeted skill training adjustments for long-term success. ([page 17](#))

This year's report shows a higher percentage of expected salary increase compared to last year's.

Requesting IT professionals to disclose their expected salary increase can help identify common trends in the expectations and inform decisions regarding compensation packages and distribution of job offers. This year, the average percentage of salary increase for **new job offers** is **31%**, which is significantly higher than last year's record of **20%**. Additionally, **24%** is the average expected salary increase in the **current job**. IT professionals with **less than 2 years of experience** are likely to expect a **higher percentage of salary increase** compared to other groups. However, it is important to take into account the effects of global uncertainties and economic shifts on referring to or maintaining these expectations in the coming year. ([page 17](#))

Data-driven insights are preferred by IT professionals when defining employer brand reputation.

Positive employer brand reputations are mostly defined by publicly accessible information that can be stated with certainty, according to the respondents of this year's study. More precisely, **40.7%** of IT professionals agree that an employer's brand reputation is positively impacted by **the length of time employees remain with an organization**. Furthermore, credible factors such as **official recognition of the company's rapid growth rate in terms of revenue and profit (34.8%)**, **work-life balance provided environment (32.6%)**, and **public awards/recognition (31.4%)**, significantly contribute to the establishment of a positive employer brand reputation as perceived by IT professionals. ([page 20](#))

In the pursuit of career advancement, communication skills are the foremost learning focus for IT professionals in Vietnam.

As part of their career growth, **67%** of IT professionals state that they want to improve their **communication skills**, which include **presenting** and **negotiating**. This goal corresponds with the global perspective offered in Hays.com's 2023 research⁽¹⁾, in which companies globally emphasize the importance of top soft skills in hiring new IT personnel, specifically problem-solving, communication, and teamwork. These soft skills are also emphasized by Forbes Advisor as necessary for tech workers⁽²⁾.

In the fast-paced changing technology and work environment, IT roles have evolved into critical business partners actively engaged in higher-level organizational discussions. To effectively contribute to these conversations, IT professionals must possess strong communication skills, enabling them to articulate the value that technological solutions bring to the organization. ([page 32](#))

Generative AI: Widespread assistance in IT work with growing popularity

Generative AI is extensively adopted by IT professionals, as evidenced by the fact that **50.4%** of them employ it in their daily work. **Code-related applications** account for 3 of the 5 five most utilized GenAI applications. Although there is some variation in accuracy ratings, **66.1%** consider **coding answers** to be moderately accurate (31 - 50%) to highly accurate (51 - 80%). Merely **4.5%** consider the accuracy to be extremely high (over 80%).

Overall, IT professionals rate Generative AI's effectiveness at **7.4 out of 10**. This evaluation is consistent with the responses obtained from developers across the globe via surveys carried out on platforms such as Stack Overflow and GitHub, where 70% of respondents indicate that these tools are advantageous for their tasks and 77% exhibit interest in integrating AI tools into their development process. ([page 32](#))

Actionable recommendations for IT Recruiting and Retention:

- **Competitive salary structures:** Ensure your company maintains competitive salary structures by regularly benchmarking against industry standards to attract and retain top talents. To keep track of other industries and by cities, see more on [pages 23 - 29](#).
- **Prioritize employee well-being programs:** Stress, mental, and physical health concerns are among the top 5 difficulties/challenges for IT professionals in their jobs ([page 17](#)). Implementing practical policies to enhance employee well-being and performance would also place a high rank in IT professionals' minds about positive employer branding ([page 20](#)).
- **Strategic employer branding and recruitment marketing:** In a competitive recruitment landscape, establishing a strong employer brand can be achieved by showcasing authentic employees' reviews, cutting-edge projects, measures of success, and growth opportunities. See the most searched information that IT professionals look for in an employer during the application process on [page 20](#).

Actionable recommendations for IT Professionals:

- **Explore the job market periodically:** Periodically explore job market trends and recruitment opportunities, especially in the most emerging sectors such as Pharmaceuticals, Banking, and Financial Services. Stay informed about demand, salary trends, and potential opportunities to make informed career decisions with [answers from IT employers^{\(3\)}](#).
- **Engage in industry networking:** Join professional IT associations, attend relevant conferences, and participate in online forums within key sectors. Leverage these opportunities for continuous learning, sharing experiences, and building valuable connections. Network to gain exposure to new opportunities and foster collaboration within your specific field. Consider exploring highlighted developer/IT groups for a fresh start, as provided in [this list from ITviec^{\(4\)}](#).
- **Prioritize healthy work-life balance:** Recognize the importance of maintaining a healthy work-life balance, especially in high-pressure environments. Establish boundaries, take breaks, and communicate openly to manage workload concerns effectively. Refer to the insights collected from [21,000+ candid reviews of IT employees^{\(5\)}](#) to identify organizations prioritizing employee well-being and professional growth.

PART III

OVERALL TRAITS OF

IT PROFESSIONALS

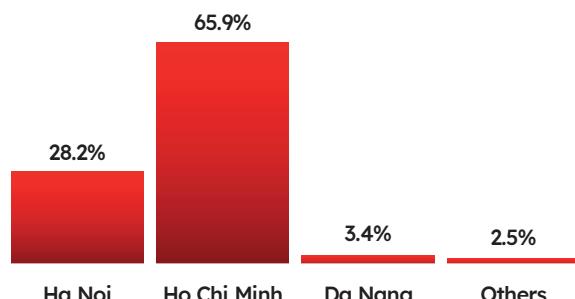

Age

The age range of the IT professionals in this year's report is from under 20 to above 35. **One-third** of them are between the ages of **23 and 26**. The second and third biggest groups are those aged **27-30 (27.7%)** and **31-35 (24.8%)**.

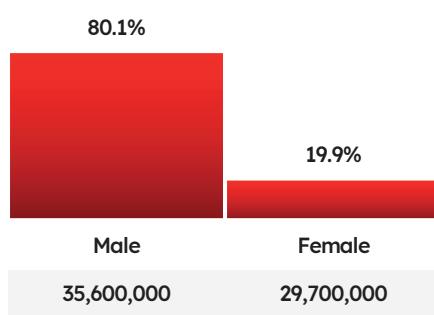

City

This year's study showed a slightly higher percentage of participants from **Hanoi** compared to last year's (**about 2% more**). **Ho Chi Minh City** remained the most appealing location in Vietnam for IT professionals (**65.9%**).

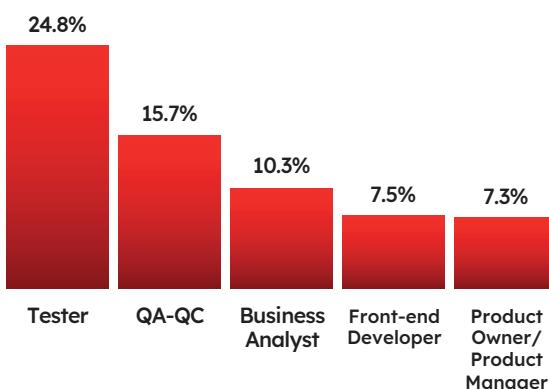

Gender & Average Monthly Salary (VND)

The gender breakdown of IT professionals in the research is **80.1%** male and **19.9%** female, no much changes from last year's ratio. The gap between average monthly salary of these two groups is **16.7%**.

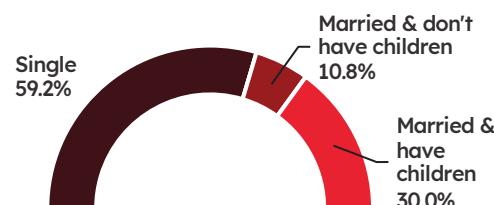

Top 5 Female IT Positions

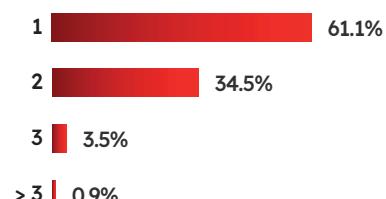

This year, the percentage of **female Tester - QA/QC** respondents remained the same as last year (around 40%). The percentage of women in **Front-end Developer** and **Product Owner/Product Manager** roles is almost the same (7.5% and 7.3%, respectively).

Marital Status

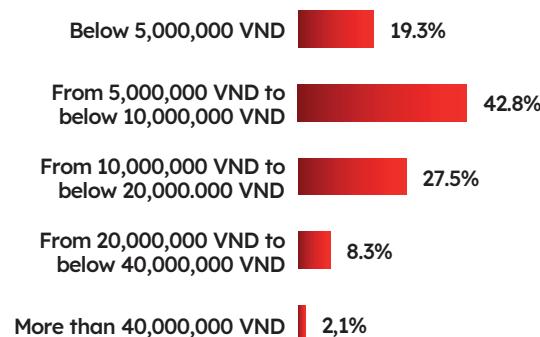

Number of Children

Monthly Expense Range

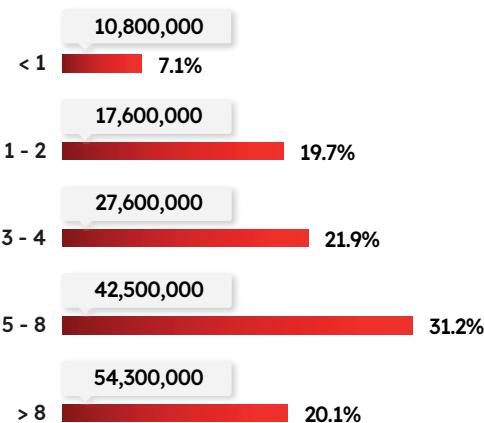

According to the results of this year's report, **42.8%** of IT professionals disclose that their average monthly expenses, including housing rent, range **from 5 to below 10 million dong**. **10.4%** of the respondents indicate that their average monthly expenses range **from 20 to over 40 million dong**.

Years of Experience in IT & Average Monthly Salary (VND)

A significant proportion of the 2,207 professionals who took part in the study (53.1%) have experience in IT at the middle level (3-4 years) to senior level (5-8 years).

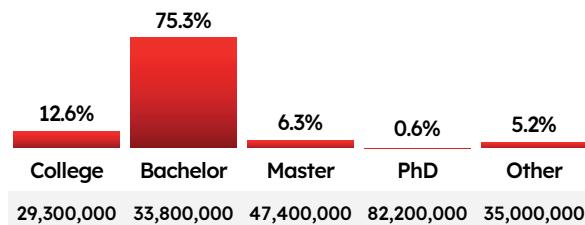

From less than 1 year to 1-2 years, the average salary increases by about 63%. From the experience range of 5-8 years to more than 8 years, the salary growth rate stays at 27.8%.

Education, IT Major & Average Monthly Salary (VND)

Bachelor's degrees are held by the majority of IT professionals (75.3%), and salaries typically relatively increase with level of education.

83.0% of IT professionals have formal degrees in IT or IT-related majors from a college or university. This group has an average salary that is 7% higher than the other group. Last year, the gap was 20%.

I study IT or IT related fields. I am a full-time graduate from a college /university.

I did NOT study IT or IT related fields. I actively learn from colleagues, friends, short-term courses, etc.

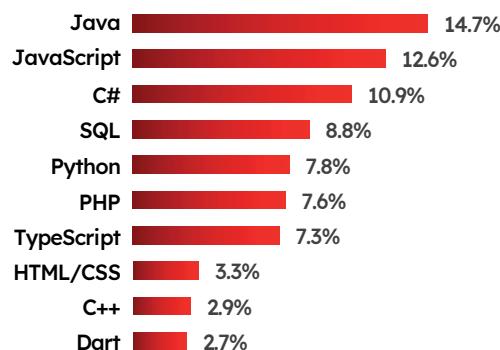

34,900,000
83.0%

32,400,000
17.0%

Top 10 Programming Languages

(primarily use)

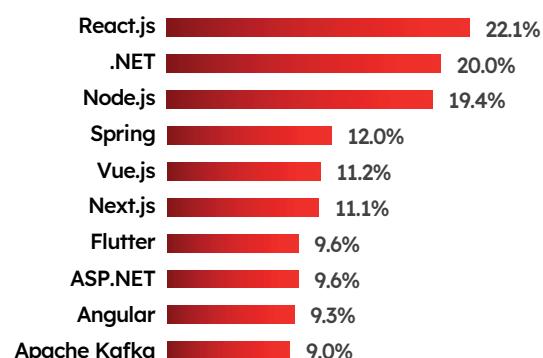

There are some changes in the order of this year's top 10 primarily used programming languages compared to last year's list. For more specifics, **Java** took the top 1 spot from JavaScript. Last year, **SQL** was only placed 7th; this year, it is 4th.

Top 10 Libraries & Frameworks

(currently use)

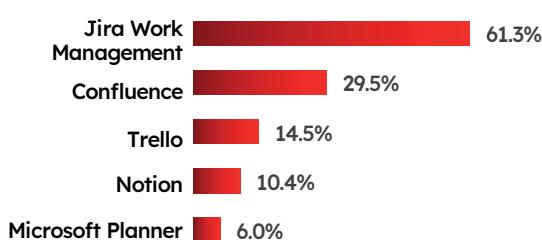

When comparing this year's Top 10 list to last year's list, some highlights include: **jQuery** is no longer in the list. **Angular** has dropped from the 6th to the 9th most currently used framework. **Apache Kafka** was first introduced in the 10th position.

Top 5 Management Tools

(currently use)

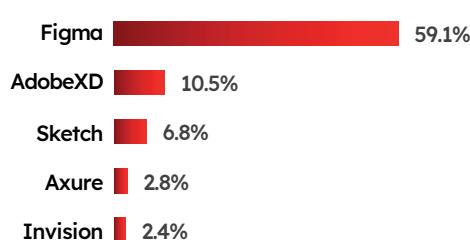

This year, **Jira** and **Confluence** continue to be the most used management tools. **Microsoft Planner** is a newcomer and ranks 5th (6%), taking the spot that Stack Overflow for Teams used to hold.

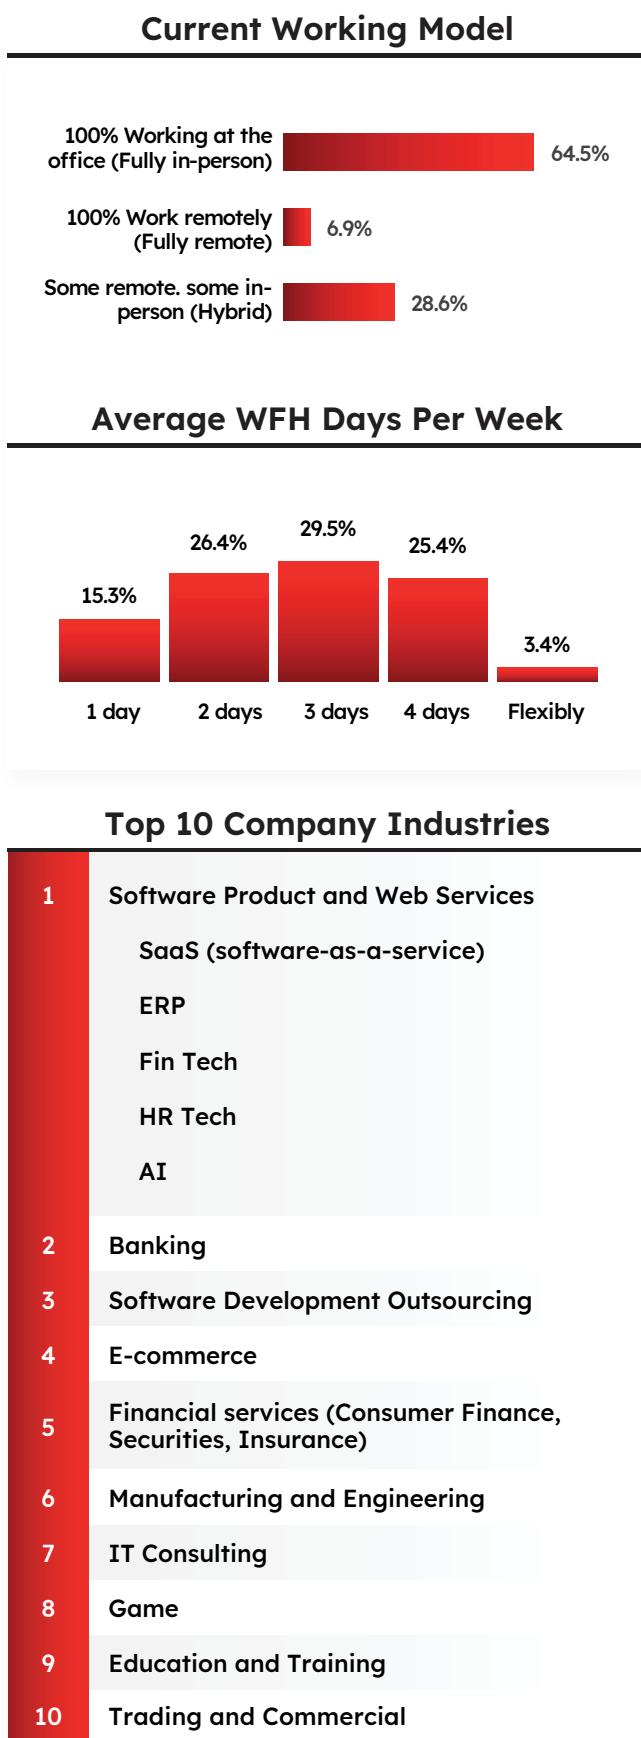

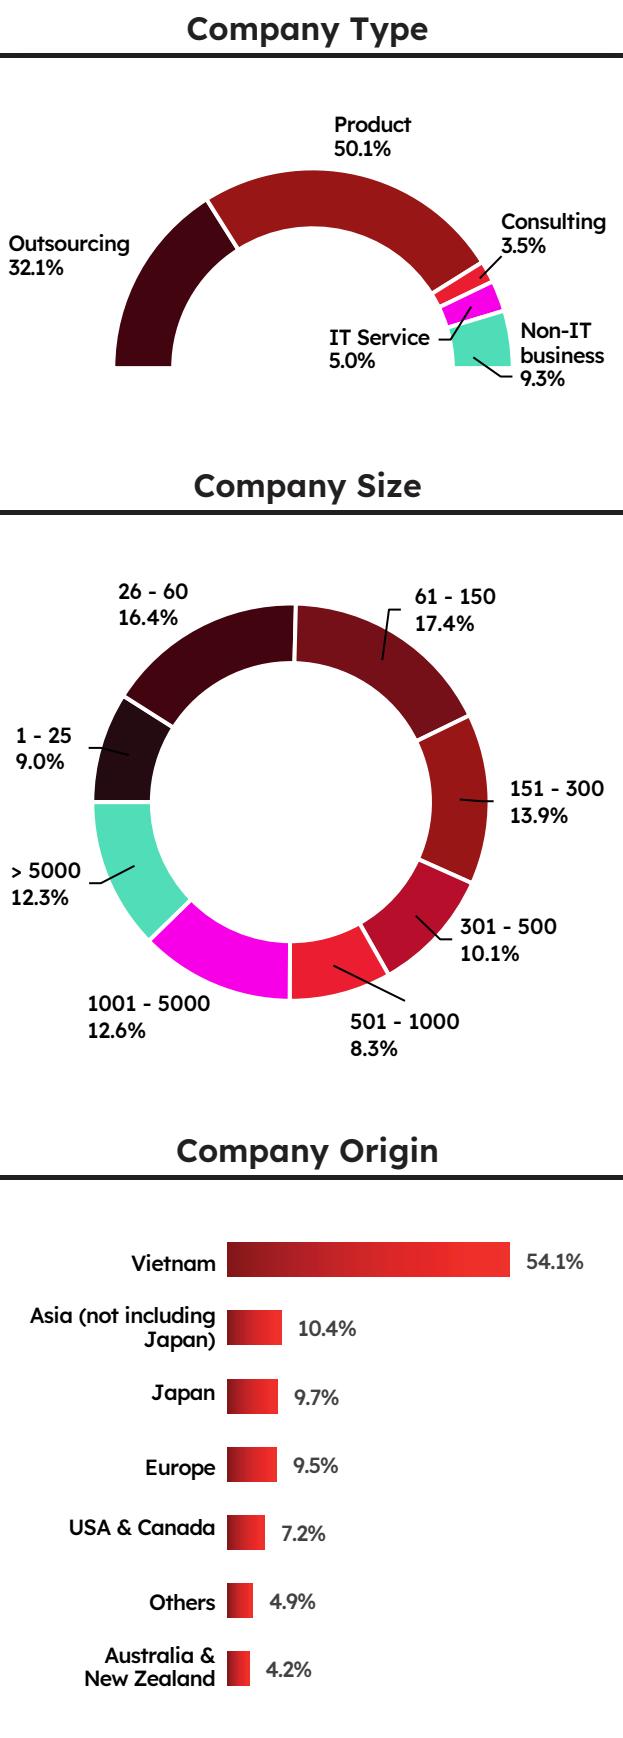

Top 5 Design Tools

(currently use)

Figma listed as the most widely used design tool among IT professionals, with 59.1% utilizing it. Even though **AdobeXD** is in second place, its share is only 10.5%.

Average Monthly Expense* By IT Position

(* include electricity, water, house renting fee, etc.)

	Below 5,000,000 VND	From 5,000,000 VND to below 10,000,000 VND	From 10,000,000 VND to below 20,000,000 VND	From 20,000,000 VND to below 40,000,000 VND	More than 40,000,000 VND

PART IV

OVERALL JOB

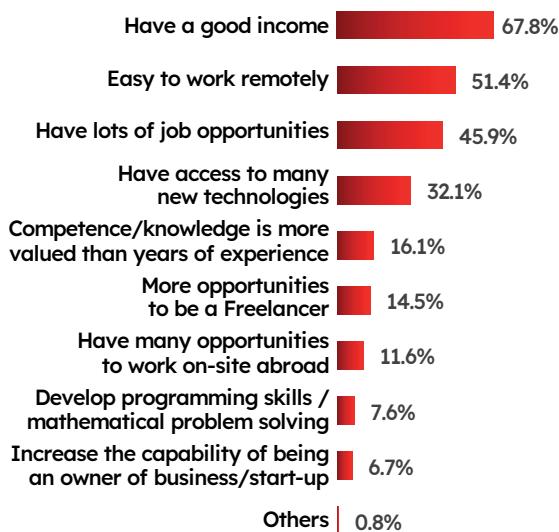

EXPECTATION

& JOB SEARCH

CHARACTERISTICS

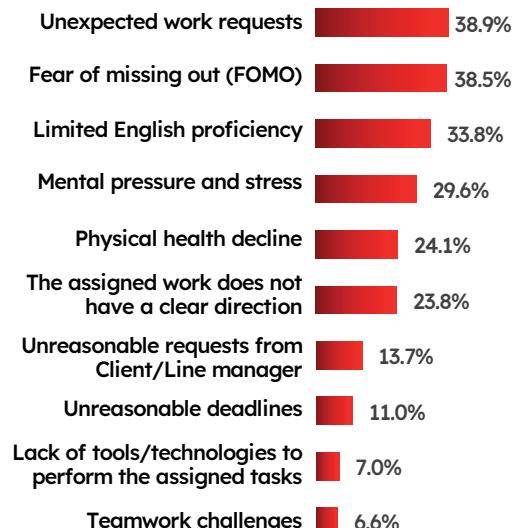

Top 10 Attractions Of IT jobs

The ranking of the most appealing aspects of IT jobs, as reported by IT professionals who participated in this year's study, has remained largely consistent with the last year's results.

Top 10 Difficulties/Challenges Of IT Jobs

Health issues have garnered increased attention in the results of this year related to difficulties and challenges of IT jobs. **Mental pressure and stress** and **physical health decline** rank 4th and 5th, respectively, with 29.6% and 24.1%.

Expected Average % Salary Increase In New Job Offer By Range Of Experience

< 1	1 - 2	3 - 4	5 - 8	> 8	Total
36%	33%	29%	29%	28%	31%

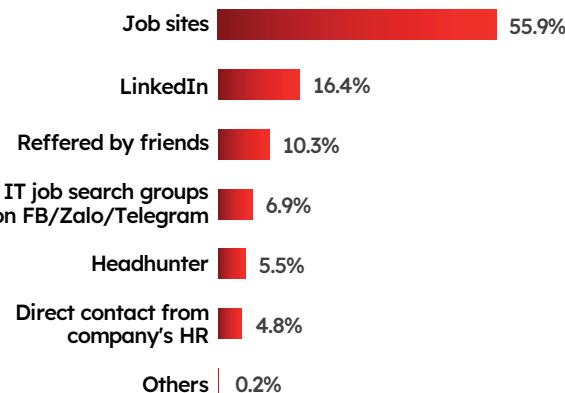

Expected Average % Salary Increase In Current Job By Range Of Experience

< 1	1 - 2	3 - 4	5 - 8	> 8	Total
35%	28%	24%	21%	21%	24%

IT professionals with less than 2 years of experience commonly expect a larger percentage of salary increase compared to other ranges and the average of all respondents.

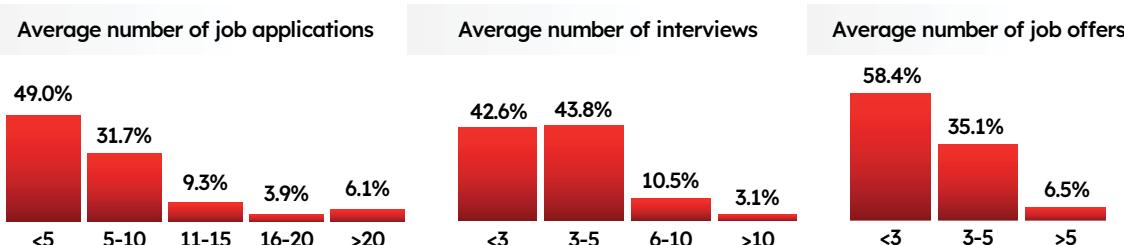

Most Effective Channels To Apply

55.9% of respondents agreed that **Job sites** are the most effective channels for IT professionals to send applications. **LinkedIn** and **Referrals by friends** are ranked 2nd and 3rd, with 16.4% and 10.3% of respondents agreeing, respectively.

Frequency of Applications, Interviews and Offers

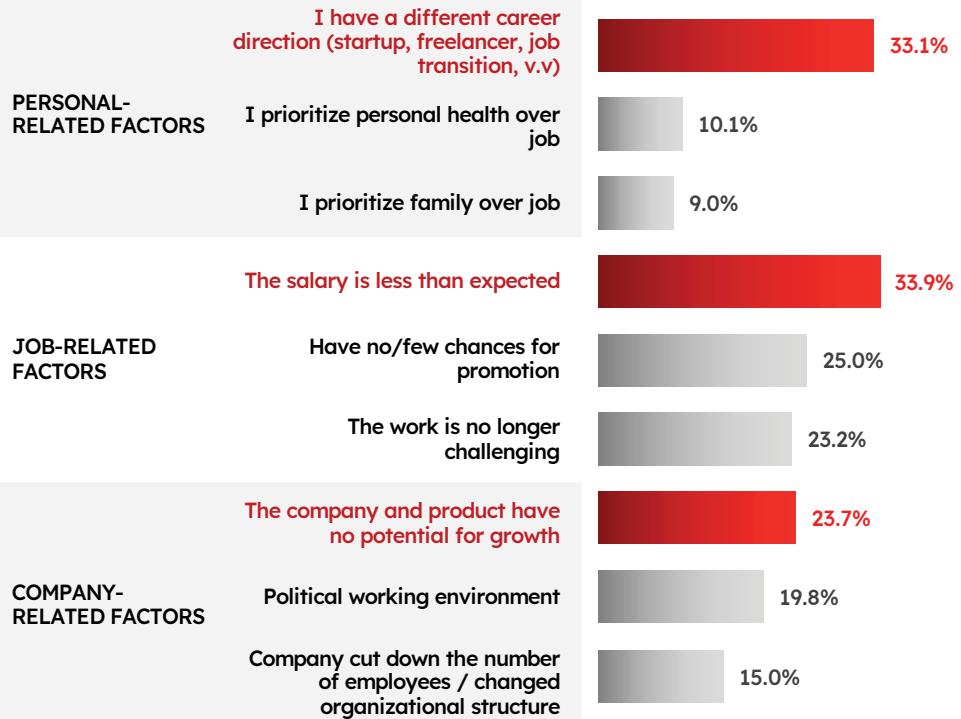

On average, when looking for a new full-time job, 6.1% of the participants submit applications for over 20 jobs, while nearly 50% apply to less than 5 job applications. Between 3 and 5 is the most frequent range during the interview phase. Nearly 60% of the participants reported receiving less than 3 job offers.

Due to current macroeconomic challenges and extensive tech layoffs, **15%** of the respondents indicated that their resignation was a direct result of the restructuring and downsizing strategy implemented by the companies.

Aside from a **lower - than - expected salary (33.9%)** as the most common reason, the **2nd** and **3rd** most common reasons for IT professionals leaving their positions are **a change in career direction (33.1%)** and **no growth potential in the company or product (23.7%).**

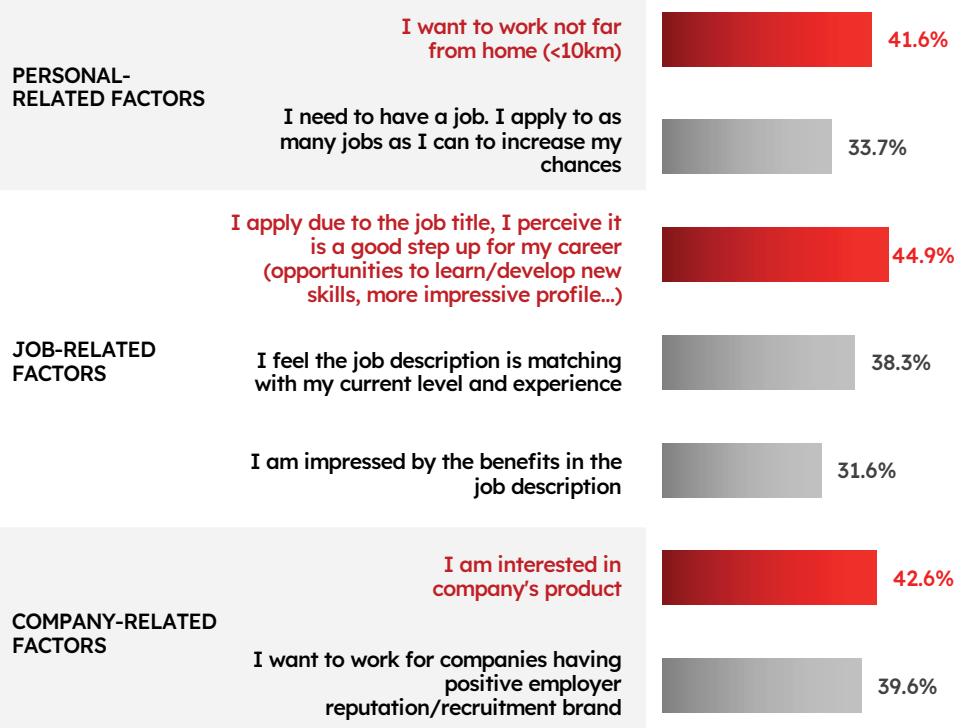

Top Reasons To Quit The Latest Job

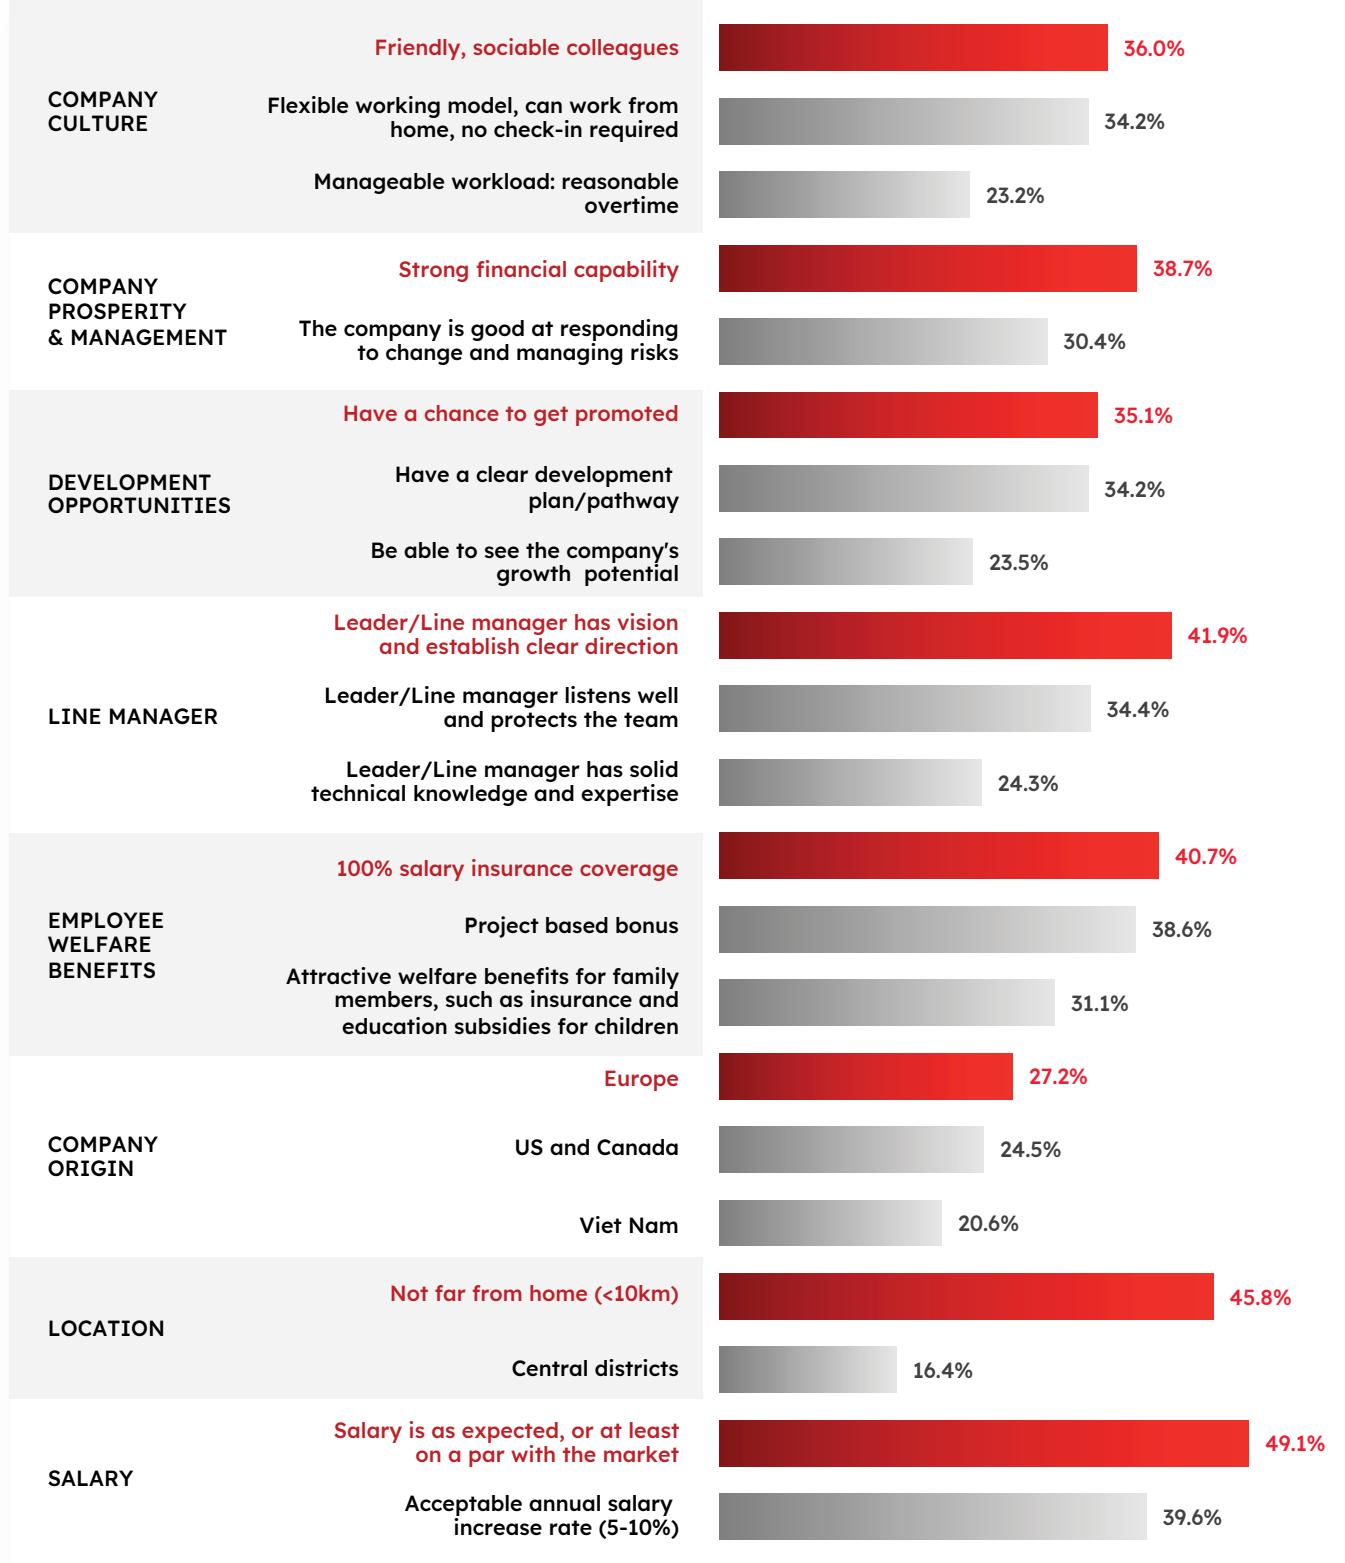

Top Reasons To Apply For A New Job, Beside Salary

In addition to the direct influence of **job description** and **career orientation matching (44.9%)**, the company's product (42.6%) ranks as the **2nd** most significant factor influencing IT professionals' decisions regarding application for a new job.

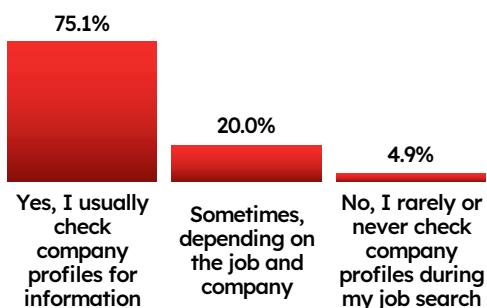

With **41.6%**, not having to commute more than 10 km to work is the **3rd** most common factor. This is also in line with the characteristics that IT professionals look for in an ideal company to work for in a long time.

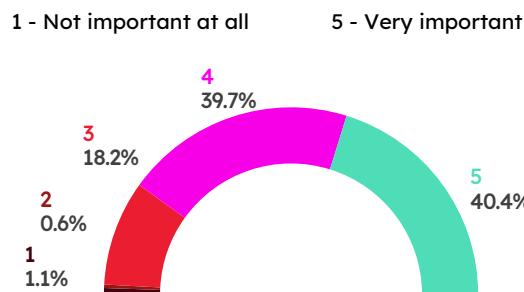

An Ideal Company For IT Professionals To Stay For The Long-term

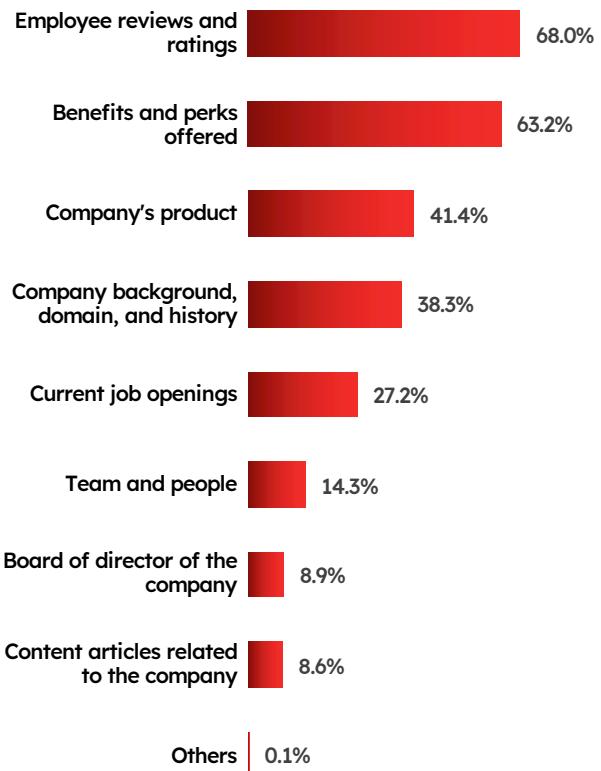

Frequency Of Researching About IT Employer During The Application Process

Importance Of Employer Brand Reputation During The Application Process

Most Information Searched About IT Employer

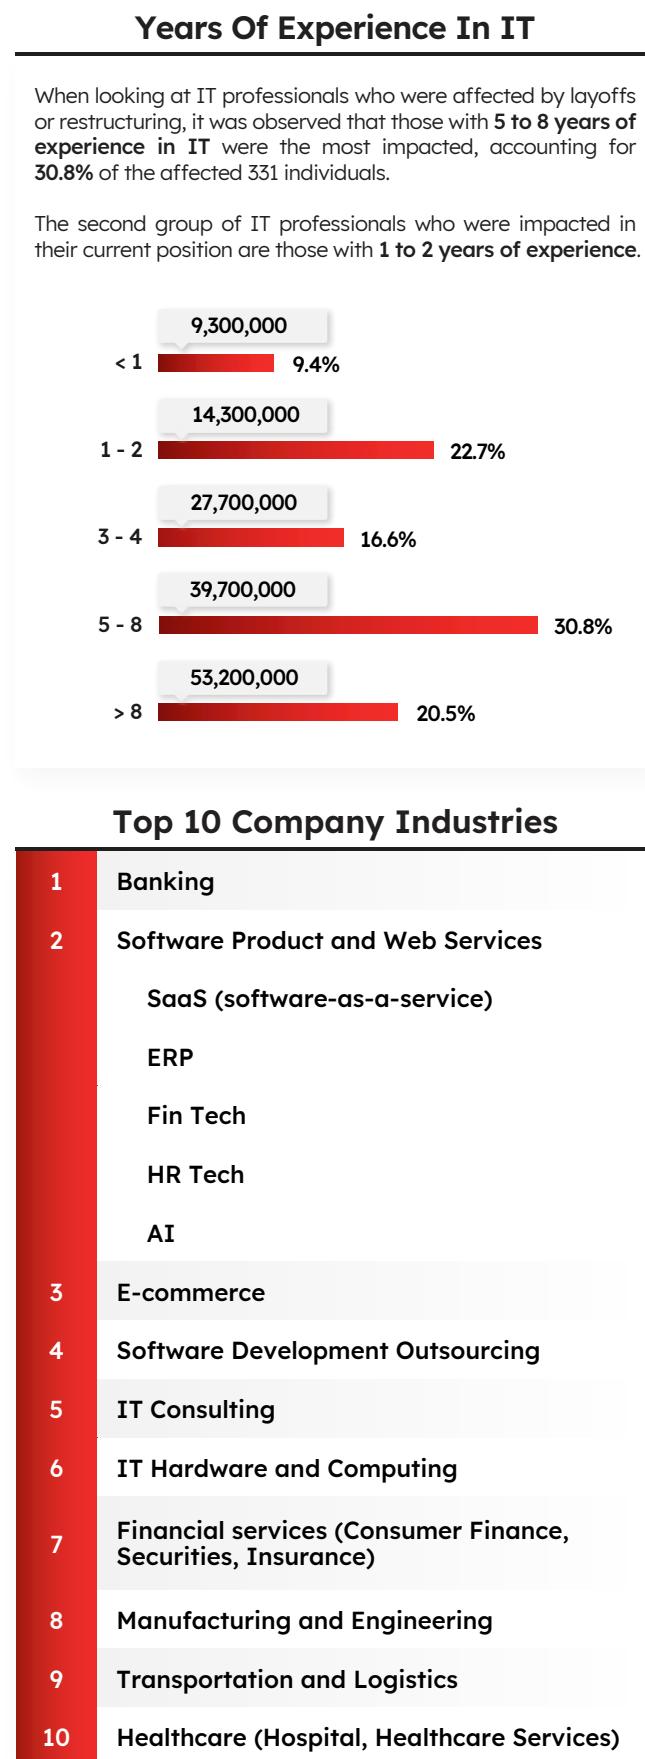

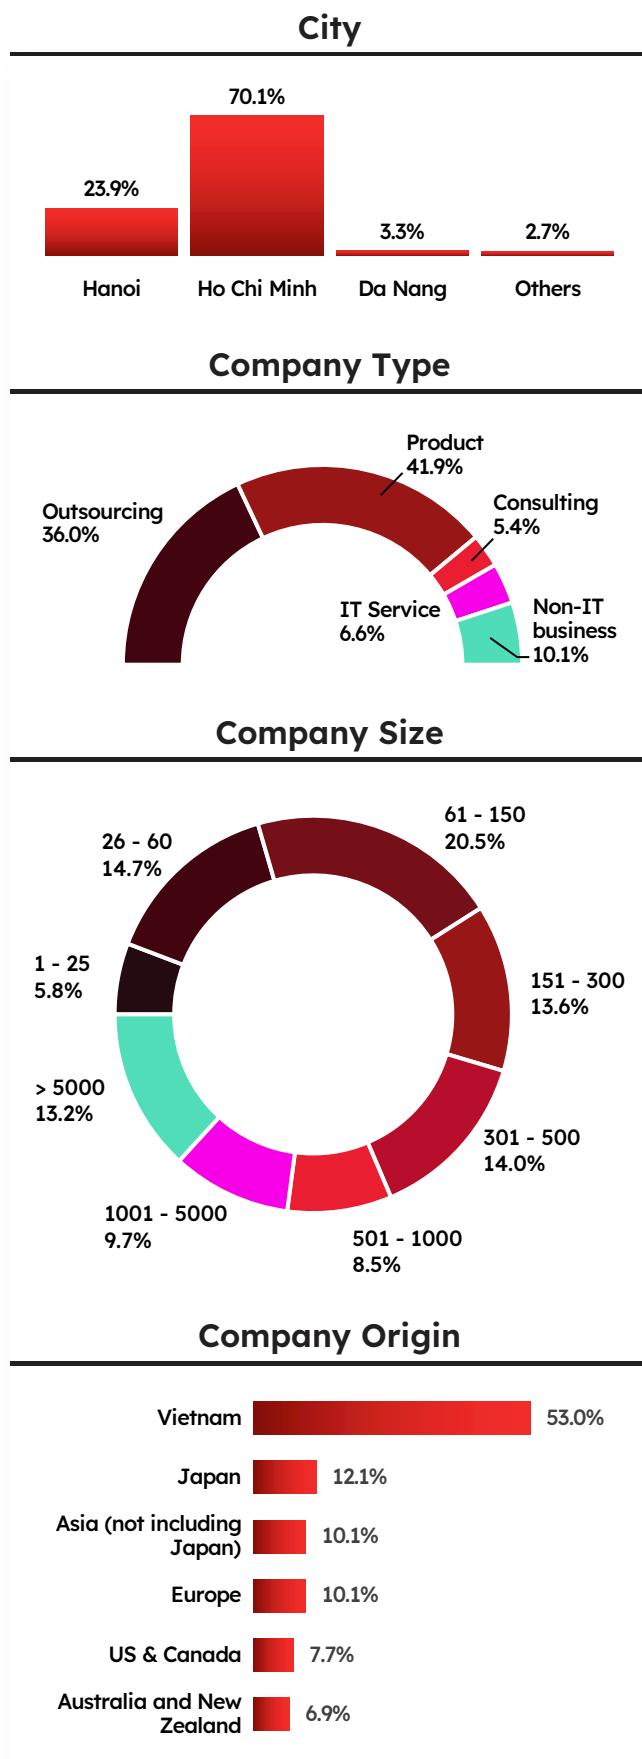

Definition About A Company With Positive Employer Brand Reputation

LAYOFF/RESTRUCTURING LANDSCAPE FOR IT PROFESSIONALS

As seen on page 18 of this year's report, **15% of respondents** cited the reduction and restructuring strategy of their employer as the reason for their resignation. The main findings related to the company include that **Product companies** and **Banking industry companies** have the greatest impact on IT professionals in terms of **Company Type** and **Top 10 Company Industries** in this review.

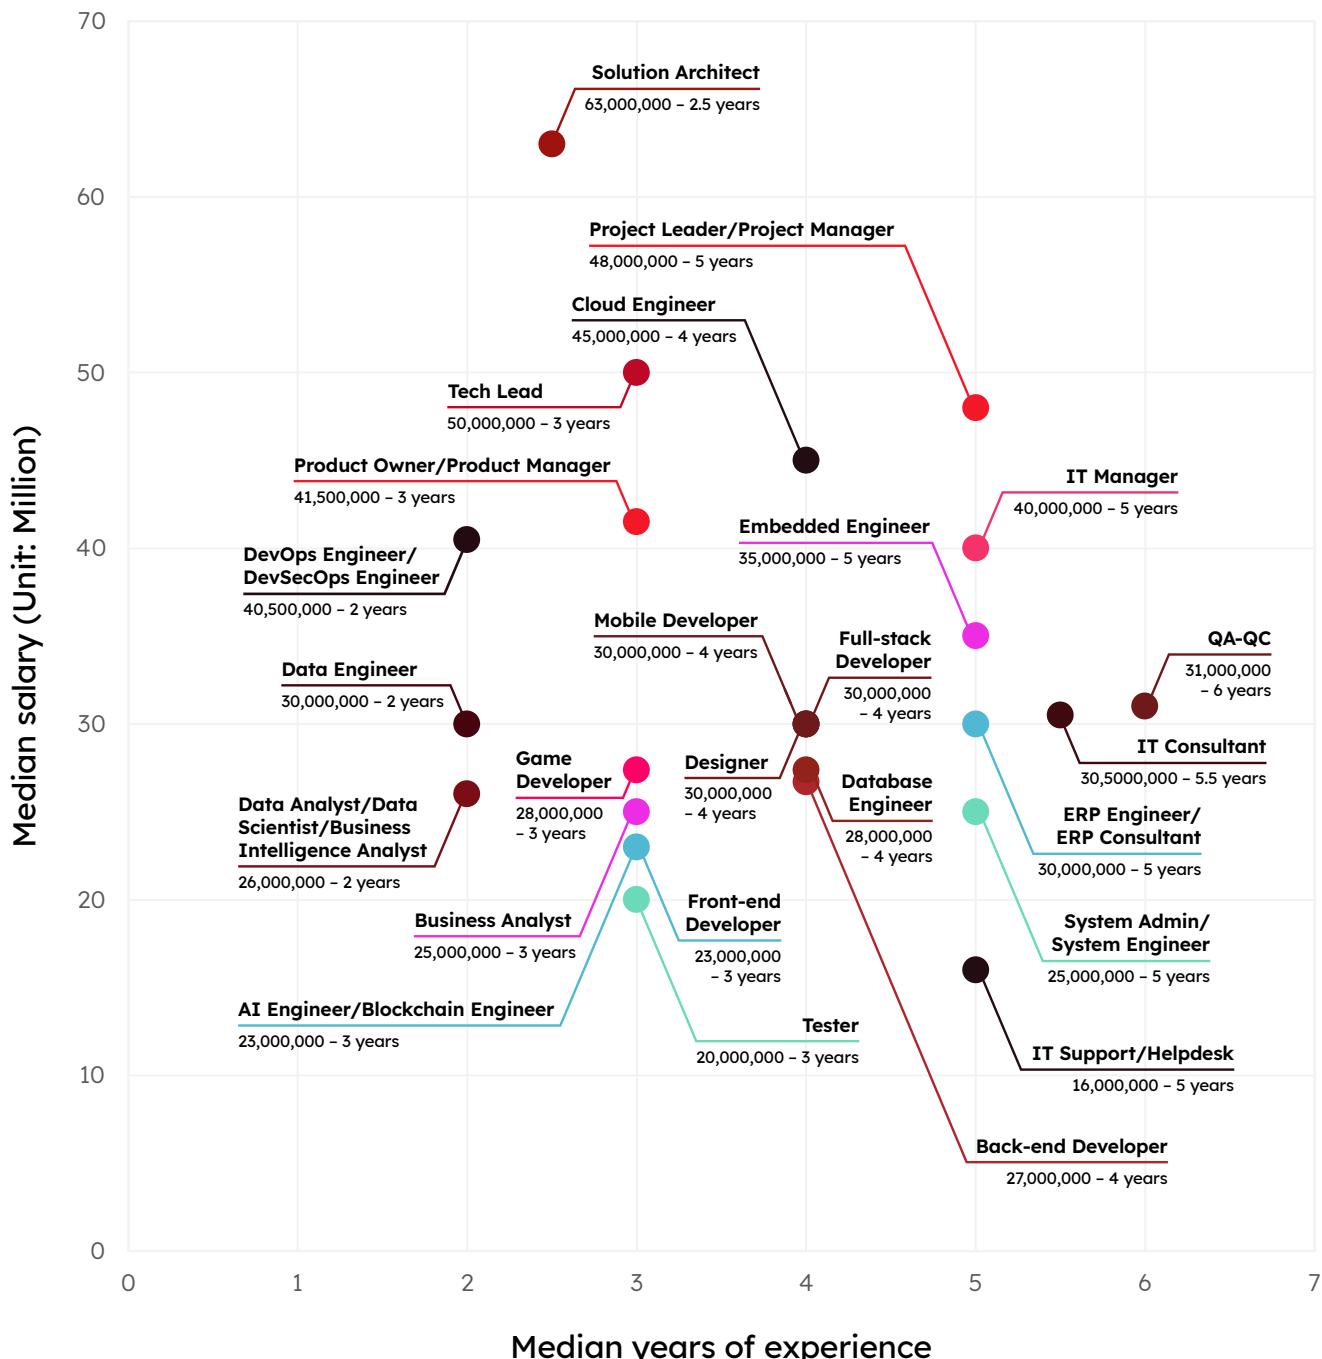

PART V

SALARY OF IT

PROFESSIONALS

MEDIAN SALARY & MEDIAN YEARS OF EXPERIENCE BY IT POSITION

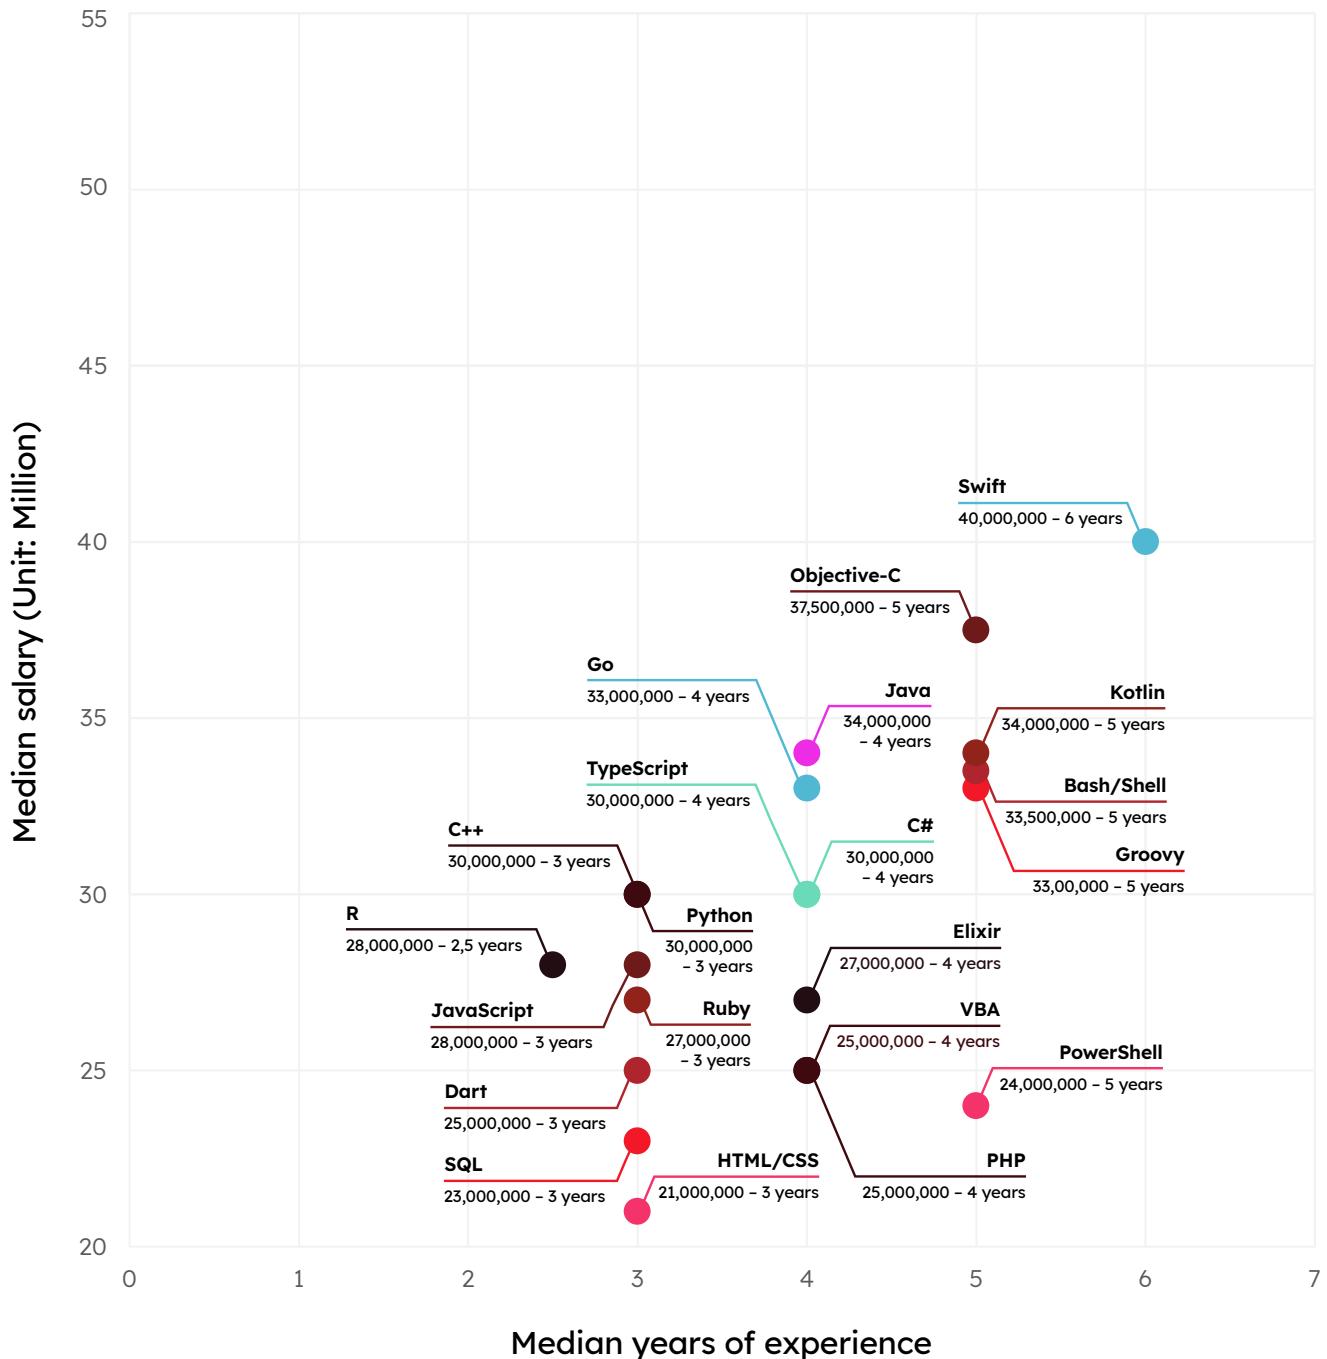

(*) Median gross monthly salary (VND), excluding Bonus and other welfare benefits.

(*) Median year of experience in current position, not total years of experience in IT.

MEDIAN SALARY BY IT POSITION & RANGE OF EXPERIENCE

AVERAGE SALARY BY CITY

AVERAGE SALARY BY CITY WITH GROWTH RATE

	2023 - 2024	2022 - 2023	% Growth Rate
Da Nang	29,400,000	27,600,000	6.5%
Ha Noi	32,400,000	34,300,000	-5.5%
Ho Chi Minh City	35,700,000	38,800,000	-8.0%
Others	31,300,000	29,000,000	7.9%
Country	34,400,000	32,400,000	6.2%

The expanded sample size of IT professionals located in **Danang** can be attributed as the primary factor contributing to the higher growth rate in the average salary, which is **6.5% higher** than last year's number. Significantly, **the percentage of IT professionals in Danang with more than 5 years of experience has increased from 33% in the previous year's results to over 50%**. The increase in professionals with higher years of experience is likely to have a positive impact on the average salary.

In Hanoi and Ho Chi Minh City, the average salaries this year slightly decreased compared to the previous year. In Hanoi, the reduction ratio was 5.5%, while in Ho Chi Minh City, it was 8%. A potential contributing factor to this state was the 76% increase in the number of respondents for this year's survey (2,207 vs. 1,257).

Meanwhile, the **average salary for the entire country** demonstrates a growth of 6.2% compared to last year's findings.

PART VI

TECHNOLOGY &

LEARNING TRENDS

2023-2024

Programming Languages To Learn In 2024

Top 3 programming languages that IT professionals plan to learn in 2024 are:

1.  Python (30.1%)
2.  Go (15.6%)
3.   Java (14.6%) and JavaScript (14.6%)

Python and Go are by far the most wanted to learn programming languages for 2 consecutive years. Java moves from 5th position last year to 3rd position this year, besides JavaScript.

Readiness Level To Learn New Soft Skills

Learning Method Preference

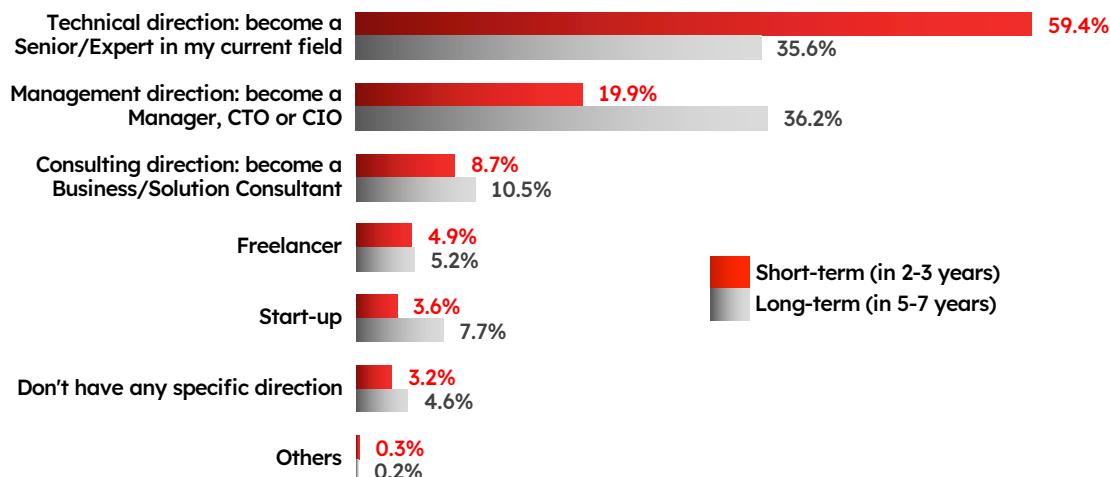

67% of IT professionals, regardless of their level of experience, plan to improve their communication skills in the upcoming year, focusing on areas like presentation and negotiation. IT professionals with more than 5 years of experience, in particular, express that they want to improve their leadership skills more than others. In the 'Fresher' group, consisting of those with less than 1 year of experience, 51.1% prioritize problem-solving skills, aligning with the top skills sought by IT employers in 2023, as reported in ITviec's IT Recruiting Trends (March 2023).

From the perspective of the average monthly learning budget, senior IT professionals (5-8 years of experience) demonstrate the highest willingness to invest, allocating 5.5 million VND per month. This amount is notably 25% higher than the overall average budget for learning observed among IT professionals in this year's study.

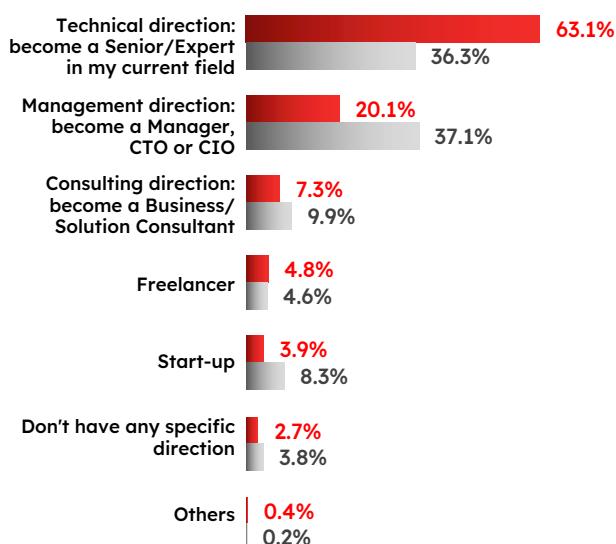

Approximately **59.4%** of IT professionals prioritize elevating their **technical expertise** in the short term (2-3 years), while **36.2%** prefer for a gradual transition into **management roles** for long-term career advancement. This trend mirrors the findings from the previous year's report, suggesting a persistent trend in individuals' career orientations.

When considering career orientation differences between male and female IT professionals, a noteworthy distinction emerges in the choice of the **consulting direction**. Female IT professionals express a greater desire toward pursuing careers in consulting compared to their male counterparts, both in the short-term and long-term periods.

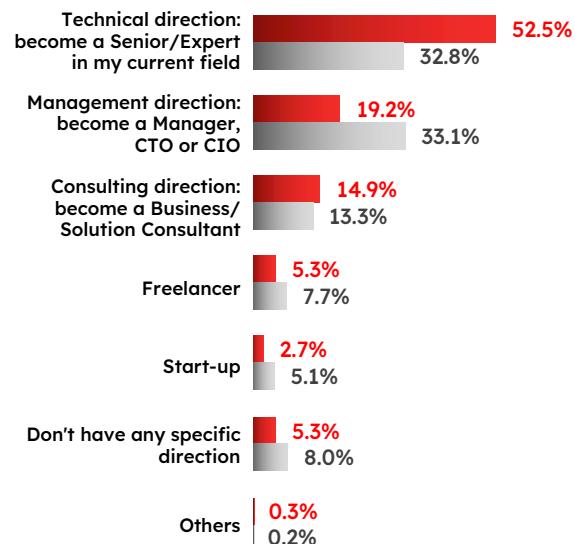

Career Orientation Of IT Professionals

Career Orientation Of Male IT Professionals

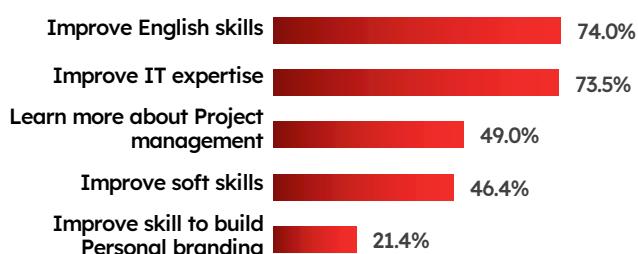

Career Orientation Of Female IT Professionals

Top 5 Skills To Improve To Follow Career Orientation

Similar to the previous year's findings, a large percentage of IT professionals report a desire to focus on improving their **English fluency** and **IT expertise** in order to advance their careers.

Project management, soft skills development, and the cultivation of **personal branding** are also notable areas of concentration.

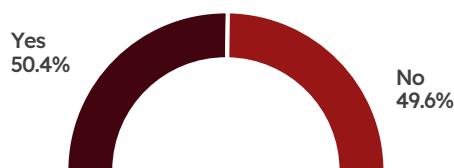

Generative AI Technology & Tools

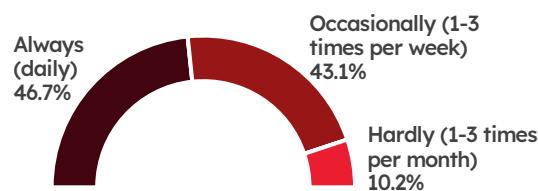

Generative AI tools are gaining traction in workplaces globally, with 29% adoption among Gen Z, 28% among Gen X, and 27% among millennials, according to Statista's 2023 survey of US professionals. Key industries leading this adoption include Marketing & Advertising, Technology, and Consulting.

In Vietnam, IT professionals show a notable familiarity with generative AI, reflecting a broader trend of widespread acceptance, usage and understanding of this advanced technology.

Applied In Daily Jobs

Accuracy Rating In Coding Answers

Concerns about Generative AI technology and tools

56.0%	Undefined Data Accuracy (If the data is incomplete, inaccurate or outdated, the results can be unreliable)
48.2%	Content Quality Control Needed (The content generated/produced still needs to be inspected and audited to eliminate lack of relevance)
19.9%	Controversial Intellectual Property (Generative AI models are trained using large datasets scrapped from the internet. Its services can expose an individual or organization to potential legal responsibilities)
19.5%	Cost Efficiency (Generative AI can create a barrier to implementation because of its expensive cost and requirement of specialized hardware & software, using APIs from extended Generative AI vendors such as GPT-4, as well as skilled personnel to operate and maintain it.)
19.0%	Jobs Take-over (Human jobs including IT jobs can be replaced by Generative AI tools/services)
